

WHAT TO EXPECT

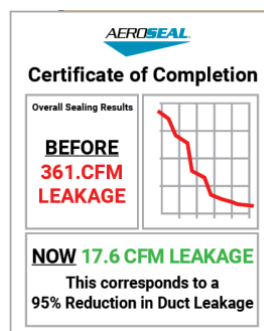

HOME PREPARATION (Before we arrive)

- 1) Confirm total number of supply register locations (hidden, closets, under furniture)
- 2) Confirm total number of return air grills (hidden, closets, under furniture, ceiling)
- 3) Please move any furniture to provide access to furnace/air handler, duct work, and register locations
- 4) Please assure all valuables are secured. Please cover any valuables (paintings, TV's, computers, etc. with a sheet or light cover), especially on same floor with furnace or air handler.

DAY OF SEALING

- 1) We usually will have a trailer to park as close to primary access (front door, side door, garage, or back door) as possible: *Please let us know if you will need access in/out of parking area when we arrive.*
- 2) We will need access to all rooms and floors to take pre and post measurements, block registers, and assure we control any overspray.
 - Cover any bird cages
 - Assure any pets can be relocated as needed.
 - We will have the air conditioning and/or heat off during the process and windows and doors will be open and/or mechanical air movement.
- 3) We will have a generator and need access to 4 direct electrical circuits; this will require (in most cases) extension cords running to multiple rooms.
- 4) PLEASE ASSURE YOUR SECURITY SYSTEM AND SMOKE DETECTORS ARE IN "OFF" OR "STANDBY" MODE. Although we do cover smoke detectors, overspray may set them off. We generally will arrive around 8:30 AM and be in the home from 4-6 hours based on leakage.

Get ready for a more comfortable, healthier and more efficient home!
